Godetia grandiflora x hybrida

Satin F1

Satins' dwarf plant habit, flowering season and overall habit are all extremely uniform. Especially outstanding performer as 10-15cm pot plant item, as they will flower profusely when about 17-20cm in height, without application of growth regulators or pinching. All plants are basal branching and flowers about 5cm in diameter are borne upright on dwarf plants. Very highly cold resistant and will flower profusely under cool climatic conditions. Plants spread to 20cm, height 20cm. For best results grow on the dry side with low feed until buds show.

1764 mix

Transplant Date:
April - May.

Flower Date:
July - September.

Use:
Pots.

Containers:
10 - 15cm pots.

Disclaimer: "Significant variations in seed, variety and crop performance, in results and in crop outcomes may occur depending upon geographic location, climate, soil type, soil conditions, cultural and management practices and other growth and development factors. Any cultural and descriptive information or other advice, recommendation, information, assistance or service provided by Highsun Express is intended as a general guide only and should not be relied upon and is provided without liability or responsibility (including for negligence) on the part of Highsun Express. It is recommended that in all cases a small scale trial production is undertaken in order to test local conditions and circumstances that may affect the crop."
